Even Moland

Rising Tides: The planet's vital lungs, the fragile life in the deep sea, and how to conserve it

Join us in the depths and get an insight into the wonderful life teeming below the surface of the sea, as well as the changes that are slowly happening there.

In *Rising Tides*, Even Moland conveys the most up-to-date knowledge about our seas and oceans. What role do the world's oceans play for life on this planet? How are the radical changes taking place in the ocean linked to the way we have exploited its resources? What are the most important threats to a healthy, abundant and well-functioning ocean?

The oceans are the planet's lungs, as well as a valuable source of food. Our ecological and climate crises mean that we have to readjust the way we use the oceans. Can we manage the transition from resource exploiter to attentive caretaker in time?

Even Moland, who is a diver and researcher, takes readers on a lively and knowledgeable journey below the surface of the ocean.

Even Moland

Even Moland (b. 1974) is a marine biologist and a diver. He's a marine scientist at The Institute of Marine Research, and associate professor in marine conservation science at the University of Agder.
